CONCRETE BASE COLOR				
				
SANDSTONE	CANYON	SANTA FE	MOCHA	RUSTIC BROWN
				
PEBBLE	DUNE	OUTBACK	SEQUOIA SAND	YOSEMITE BROWN
				
DARK GRAY	SILVERSMOKE	LIGHT GRAY	OMAHA TAN	HARVEST GOLD
				
BAYOU	COCOA	SANGRIA	TILE RED	BRICK RED
				
SAN DIEGO BUFF	SUNSET ROSE	BAJA RED	TERRA COTTA	SPANISH GOLD
				
SOUTHERN BLUSH	SALMON	MESA BUFF	PALOMINO	FLAGSTONE BROWN
				
MESQUITE	TAUPE	SIERRA	ADOBE	KAHLUA
				
PEWTER	COBBLESTONE	GRAPHITE	WILLOW GREEN	GREEN SLATE

KIM Waterproofing Admixture Agent

KIM provides maximum waterproof protection by forming crystals throughout the concrete. The chemicals lie dormant until water activates crystal growth, blocking the flow of water through the concrete. Using KIM eliminates the need to use conventional waterproofing membranes by protecting the concrete from the inside out.

Achieve Peace-of-Mind

Even the best quality external waterproofing membrane will eventually dry, crack or otherwise deteriorate. When this happens, your concrete structure is left vulnerable to water and corrosive elements. Unlike external membrane systems, KIM is impervious to physical damage or deterioration. It lasts the lifetime of the structure and, by blocking out waterborne contaminants, it protects steel reinforcements from corrosion and extends the life of the structure.
